

Project Title	Bubble Cursor Pointing Interaction Study
Purpose of the Study	This research is being conducted by George Morales at Emory University. The purpose of this project is to investigate user interaction with alternative pointing techniques, specifically a custom Bubble Cursor. By studying how participants engage with this enhanced selection method, the project aims to assess its speed, accuracy, and overall effectiveness compared to a traditional mouse cursor. The findings will help inform future design improvements for more efficient and accessible pointing interfaces.
Procedures	• You will be assigned either a traditional pointing cursor or the custom bubble cursor to complete the study tasks. • You will begin with practice trials to familiarize yourself with the assigned pointing interaction technique. • We may ask to collect screen recordings or screenshots during the study for further analysis. • During each trial, we will collect performance data such as selection accuracy, total selections, cursor movement distance, and task completion time. • The time commitment for this study will be approximately 5 to 10 minutes, as specified in the advertisement. You may choose to withdraw from the study at any time.
Potential Risks	There may be some risks associated with participating in this research study related to usability challenges. For example, you may experience frustration, confusion, or fatigue while interacting with the dashboard, widgets, graphs, carousel, or other interface elements. No other risks are foreseen.
Potential Benefits	There are no direct benefits to participants.
Compensation	There is no compensation for participating in this study. Your participation is entirely voluntary, and you may withdraw at any time without penalty.
Confidentiality	The research team will treat all data collected from this study with confidentiality. All data will be de-identified. Paper records will be stored in a locked office, while electronic data, including screen recordings and screenshots, will be stored on a password-protected computer system. If we publish a report or article about this research, your identity will be protected to the maximum extent possible. Once the research is completed, all data will be fully anonymized. Your information may be shared with representatives of Emory University or governmental authorities if you or someone else is in danger or if required by law.

Right to Withdraw and Questions

Your participation in this research is completely voluntary. You may choose not to take part at all. If you decide to participate in this research, you may stop participating at any time. If you decide not to participate in this study or if you stop participating at any time, you will not be penalized or lose any benefits to which you otherwise qualify.

If you are an employee or student, your employment status or academic standing at [redacted] will not be affected by your participation or non-participation in this study.

If you have questions, concerns, or complaints, or if you need to report an injury related to the research, please contact the investigator:
