

Project Title	Fitts Law Test and Experimentation
Purpose of the Study	This study, conducted by George Morales at Emory University, aims to evaluate user interactions with pointing devices through a Fitts' Law experiment. By analyzing participant performance in target selection tasks, we seek to improve the design and usability of input devices and interfaces.
Procedures	• You will be asked to complete a short questionnaire about your experience with pointing devices and user interface navigation. • You will perform a series of target selection tasks, clicking on circles of varying sizes and distances using a mouse, trackpad, or touchscreen. • You will complete at least three practice trials to familiarize yourself with the task before starting the main evaluation. • You will then complete 15 test trials, where you must select targets as quickly and accurately as possible. • We will record data such as reaction time, accuracy, and movement patterns during the trials. • The total time commitment for this study is approximately 10 to 15 minutes. You may withdraw from the study at any time.
Potential Risks and Discomforts	There may be some risks associated with participating in this research study related to usability challenges. For example, you may experience frustration, confusion, or fatigue while interacting with the dashboard, widgets, graphs, carousel, or other interface elements. No other risks are foreseen.
Potential Benefits	There are no direct benefits to participants.
Compensation	There is no compensation for participating in this study. Your participation is entirely voluntary, and you may withdraw at any time without penalty.
Confidentiality	The research team will treat all data collected from this study with confidentiality. All data will be de-identified. Paper records will be stored in a locked office, while electronic data, including screen recordings and screenshots, will be stored on a password-protected computer system. If we publish a report or article about this research, your identity will be protected to the maximum extent possible. Once the research is completed, all data will be fully anonymized. Your information may be shared with representatives of Emory University or governmental authorities if you or someone else is in danger or if required by law.

**Right to Withdraw
and Questions**

Your participation in this research is completely voluntary. You may choose not to take part at all. If you decide to participate in this research, you may stop participating at any time. If you decide not to participate in this study or if you stop participating at any time, you will not be penalized or lose any benefits to which you otherwise qualify.

If you are an employee or student, your employment status or academic standing at [redacted] will not be affected by your participation or non-participation in this study.

If you have questions, concerns, or complaints, or if you need to report an injury related to the research, please contact the investigator:
